PHASE 1

Generating Visual Assets

Turn your photo into a cinematic, animated hero image.

01

Generate Static Frames

Go to labs.google/fx/tools/whisk — upload your photo as the subject, then use the style prompt below to generate cinematic portrait frames.

WHISK STYLE PROMPT

Cinematic portrait — high-contrast dual-tone lighting, deep blues + fiery oranges.

Mood: dramatic, premium, modern. Think movie poster hero section.

Key light: strong warm orange/red. Fill light: cool blue shadow, opposite side.

Background: dark navy top, fading to warm orange/red at bottom.

Subject: close-up, looking upward. Low-angle camera. Heroic, inspiring vibe.

Finish: smooth, glossy, professional. Center subject with text space left and right.

02

Animate the Frame

Select the frame you love inside Whisk, click the Animate button, then paste the short prompt below.

ANIMATION PROMPT

A smooth, cinematic 3D parallax transition — slow zoom, gentle light shift, subtle particles.

■ PRO TIP

Generate 4–6 different frames and pick the most dramatic one before you animate.
Quality input = quality output.

■ Tool :

[Google Whisk](#)

■ URL :

labs.google/fx/tools/whisk

PHASE 2

Converting Animation for Web

Export your animation as WebP frames, ready for the browser.

03

Convert to WebP Format

Go to ezgif.com/video-to-webp — upload your animation and apply these exact settings:

Setting	Value
Resolution	Original
FPS	15 (or closest native FPS)
Quality	85

04

Extract Frames

- Click the Split button on ezgif.
- Download the generated ZIP file and unzip it on your computer.
- Rename the folder to "sequence" — the AI code references this exact name.

PHASE 3

Engineering with Google Antigravity

Use AI to scaffold your entire Next.js portfolio in minutes.

05

Setup the Project

Download Google Antigravity for free at antigravity.google — drag and drop your unzipped frames folder into the tool and rename it "sequence".

CRITICAL

The folder **MUST** be named "sequence" — the generated code references this exact folder name. If it is named anything else the animation will not load.

06

Generate Code via AI Prompt

Open the Agent Chat panel in Antigravity, select Gemini 3 Pro (high) and paste the system prompt on the next page.

ANTIGRAVITY SYSTEM PROMPT

ACT AS: A Senior Creative Developer (Awwwards-level) specializing in Next.js, Framer Motion, scroll interactions.

TASK: Build a high-end Scrollytelling Portfolio. Core mechanic: scroll-linked animation scrubbing an image sequence.

TECH STACK: Next.js 14 (App Router) · TypeScript · Tailwind CSS · Framer Motion · HTML5 Canvas.

ASSETS: /sequence/ — WebP frames named sequentially (approx. 89 frames).

COMPONENT 1 — ScrollyCanvas.tsx: 500vh parent + sticky h-screen canvas. Preload images in useEffect. Map scroll to frame index.

COMPONENT 2 — Overlay.tsx: Parallax text over canvas (z-10). 0% center · 30% left · 60% right.

COMPONENT 3 — Projects.tsx: Glassmorphism grid — backdrop-blur, thin borders, subtle hover glow.

RULES: Use Canvas (not video). object-fit cover for all screen sizes. Clean, modular code. Use Nano Banana for UI components.

07

Preview & Personalize

Run `npm run dev` in your terminal to preview the site live. Then give your personal info to the AI to auto-fill all content sections:

- Portfolio project details & case studies
- Work experience & career timeline
- Skills, tools, and key achievements

Quick Reference

Step	Tool	Action	URL
01	Google Whisk	Generate cinematic portrait frames	labs.google/fx/tools/whisk
02	Google Whisk	Animate selected frame	labs.google/fx/tools/whisk
03	ezgif	Convert video to WebP (FPS 15, Q 85)	ezgif.com/video-to-webp
04	ezgif	Split WebP into individual frames	ezgif.com/video-to-webp
05	Google Antigravity	Import frames folder, rename sequence	antigravity.google
06	Google Antigravity	Run Gemini 3 Pro with system prompt	antigravity.google
07	Terminal / AI	npm run dev — personalize content	—
